```

ი

The invention relates to a novel human apoptosis-associated factor (AAB60386, AAB60387), designated NT2RW1000558, which contains a death effector domain (DED) and a caspase family cleavage domain and is capable of inducing apoptosis in cells. The invention also relates to nucleic acids encoding the protein (AAF27407, AAF27408); variants of the protein

Polynucleotide encoding an apoptosis-associated factor protein with death effector domain and caspase family-cleavage domain, useful in regulating diseases with cell proliferation.

Claim 3; Page 44-47; 53pp; Japanese.

The apoptosis-related factor is useful in regulating diseases associated with cell proliferation and in screening drug candidates e.g., for regulating cell proliferation or cell death in ischaemic diseases and chronic viral diseases. The present sequence represents a full-length cDNA encoding the human apoptosis-associated factor NT2RM1000558

The present invention describes an isolated tumour-associated antigenic CC target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide CC sequences (see SEQ ID NO:1 to 4622); (b) the full-length coding region of CC (a); (c) the complement of (a) or (b); (d) a sequence that has 80% CC sequence identity to (a)-(c); or (e) a sequence that hybridises to (a)-CC (c). Also described: (1) an expression vector comprising the above comprising: (a) an amino acid sequence emoded by any of the above comprising: (a) an amino acid sequence emoded by any of the above comprising the above polypeptide; (4) an isolated polypeptide; (6) an isolated polypeptide; (6) an isolated polypeptide; (6) an isolated by the full-cc comprising the above polypeptide fused to a heterologous polypeptide; (6) an isolated antibody that binds to the above polypeptide; (7) a process CC for producing the above polypeptide; (8) an isolated oligopeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter contained within the container; (12) methods of the composition of matter contained within the container; (12) methods of containing the growth of a cell that expresses the above protein, where the growth of the cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a growth of the above protein; (11) a method of determining the protein and (17) a methods of disorder associated with increased expression or activity of the above comprising the protein described above.
                   therapy. The composition and methods are useful for diagnosing, preventing or treating cancer. The composition is also used for preparing a medicament for the therapeutic treatment or diagnostic detection of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid molecule and encoded polypeptide, for diagnosing, preventing or treating cell proliferative disorders such as cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       human; tumour-associated antigenic target; TAT; cytostatic; gene therapy; cancer; cell proliferative disorder; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ADQ86891 standard; cDNA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; SEQ ID NO 3766; 5504pp; English.

                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to the isolation of genes encoding 9 human apoptosis-related proteins. The nucleotide sequences AAA95790-A95798 encode the human apoptosis related proteins by linking to the genes can be used to generate fusion proteins by linking to the gene for the human immunoglobulin G Fc (IgG Fc) portion (AAA95799) for increasing the stability of the fusion protein as compared to the human protein only. The gene and encoded protein may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate apoptosis associated protein expression, e.g. cancer (e.g. colon, breast and prostate cancer, melanomas and lymphomas), inflammation, autoimmune disorders (e.g. colon, breast and prostate cancer multiple sclerosis) and viral infections (e.g. herpes))
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                24-MAR-1999;

Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers.

Claim 1; Page 2451; 9803pp; English.

```
AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the present invention. N.B. pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

23 CCAGAAAGATCCAAAACAAGTGGCTGCGGCCCTCGCCCCAGGAGTCATCGGACGCCAGAAT 82	94.3%; Score 1775.2; DB 3; Length 2044; milarity 96.7%; Pred. No. 0;	characterisation of the polynucleotide and protein sequences Sequence 2044 BP; 457 A; 620 C; 603 G; 364 T; 0 U; 0 Other;	cardiovascular, reproductive, gastioninestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases. Polymoclectice sequences AAF18435 - AAF18433 and peptide AAB58549 are	or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The proteins may be used to treat disorders such as	antagonists may have neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular active general; vulnerary, gastrointestinal general; nephrotropic; antinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein	Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AAB58106 - AAB58548. Lung cancer associated proteins and polynucleotide sequences, their agonists, and	antigens, useful for treatment, prevention, and diagnosis of disorders such as lung cancer. Claim 1; Page 772-773; 1425pp; English.	WPI; 2000-587514/55. P-PSDB; AAB58420.	Ruben SM;	2 Z 0 0	12-MAR-1999: 99US-0124270P.	21-SEP-2000.	Homo sapiens. WO200055180-A2.	numan; lung cancer associated protein; neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular active; vulnerary; gastrointestinal; nephrotropic; antiinfective; gynecological; antibacterial; diagnosis; neural disorder; immune disorder; reproductive; proliferative disorder; wound healing; infectious disease; ds.	Lung cancer associated polynucleotide sequence SEQ ID 315. The invention relates to an isolated polypeptide comprising a death CCC domain (DD), death effector domain (DED) or NB-ARC domain. The invention CC is useful for identifying a binding agent, preferably a protein or a drug CC that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC Cdomain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or CC (CC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or CC (CC detecting the association of the domain and the candidate binding agent, CC spectroscopy (MS) and FPA. The invention is useful for modulating the CC (Industry of a cell process such as cell proliferation, SPA, ultraviolet (UV) or CC (Industry of a cell process such as cell proliferation, cell adhesion, cell stress responses, responses to microbial infection and B cell (CC immunoglobulin class switching, in particular apoptosis within a cell.) CC (Industry of CC precifically reactive with CTDD DD of C. trachomatis, C. (CC (CC muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the cinvention is useful for modularing the activity of oncogenic proteins. The content of the activity of oncogenic proteins and for CC (Industry Department of CC (Industry D
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polypeptide comprising a death domain or death effector domain, useful for discovery of drugs that suppress infection, inflammation, allergy, sepsis, autoimmunity, allograft rejection and other diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          misc_feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cbs

The present invention provides novel death Domain (DD) and death effector cd domain (DED) proteins and nucleic acids encoding them. The invention also CC provides death domain containing protein such as Chlamydia trachomatis CC death domain containing protein (CTDD) DD and neural growth factor creeptor-interacting death domain (NIDD) DD. The invention is useful for CC identifying a binding agent (e.g. protein or drug) that binds a DD. DED CC or NB-ARC domain from DAP3. IRAK4, CTDD, DED4 or NIDD with a candidate CC that modulates the association of a DD, DED or NB-ARC domain with protein CC that binds the DD, DED or NB-ARC domain. The invention is also useful for CC cell proliferation, cell stress responses, responses to microbial CC infection and B cell immunoglobulin class swithing. DDs, DED5 and NB-ARC domain antibodies are useful for discovery of drugs that suppress infection, autoimmunity, inflammation, allograft rejection, sepsis and other diseases. CC DD, DED5 or NB-ARC domain proteins are used to treat infection, allergy, autoimunity, inflammation, allograft rejection, sepsis, keratinocyte inflammatory hyperplasia and smooth muscle cell proliferation in arteries contibody therapy and gene therapy. The present sequence is human DED4 cantibody therapy and gene therapy. The present sequence is human DED4 cantibody therapy and gene therapy. The present sequence is human DED4 cantibody therapy and gene therapy. The present sequence is human DED4 cantibody therapy and gene therapy. The present sequence is human DED4 cantibody therapy and gene therapy. The present sequence is human DED4 cantibody therapy and gene therapy.

```
The present invention relates to the isolation of novel cDNA sequences which encode human secreted proteins. The cDNA sequences have been concept from a variety of human tissues. The invention also provides a method for producing proteins from these polymucleotide sequences. The concept from the production and the cell is also useful for identifying compounds that modulate expression of the polymucleotide sequences (c.g. cancer), immune deficiency disorders (e.g. severe combined immunodeficiency (c.g. carting diseases such as hyperproliferative disorders (e.g. cancer), immune deficiency disorders (e.g. severe combined immunodeficiency (sCID)), autoimmune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis) and confidence of the invention are also useful in gene therapy. AAS62214-AAS62838 crepresent the cDNA sequences of the invention that encode for novel human concept of the invention represent the cDNA sequences of the invention that encode for novel human concepts of the invention that encode for novel human concepts of the invention that encode for novel human concepts of the invention that encode for novel human concepts of the invention that encode for novel human concepts of the invention that encode for novel human concepts of the invention that encode for novel human concepts of the invention that encode for novel human concepts of the invention that encode for novel human concepts of the invention that encode for novel human concepts of the invention that encode for novel human concepts of the invention that encode for novel human concepts of the invention that encode for novel human concepts of the inventio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 06-APR-2000; 2000US-0195604P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polynucleotides encoding secreted hma, HIV and Crohn's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Page 280; 391pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Clark HF,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC AAM399166 to AAM99904 encode the human proteins given in AAM2525 to CC AAM35963. The proteins can have activities based on the tissues and cells CC they are expressed in, such as: antiinflammatory; antirheumatic; CC entral nervous system; virucide; anti-HIV; fungicide; antimutagen; CC cardiovascular; antianaemic; antiangergant; haemostatic; vulnerary; CC antiulcer; osteopathic; dermatological; antiallergic; antiasthmatic; CC antidiabetic; cytostatic; neuroprotective; antidepressant; noutropic; CC antidiabetic; cytostatic; neuroprotective; antidepressant; noutropic; CC antidiabetic; cytostatic; neuroprotective; antidepressant; noutropic; CC antidiabetic; roteins and immunostimulant. The proteins and polynucleotides cencoding them can be used in gene therapy, antisense therapy and vaccine production, The proteins and polynucleotides are useful for screening for CC agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, CC rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, CC rections, autoimmunity, genetic diseases, haematopoietic disorders, CC anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, CC anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, CC cateoporosis, severe combined immunodeficiency, eczema, allergic crhintits, asthma, diabetes, cancer, multiple sclerosis, depression, cc neurological disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                CC The invention provides human apoptosis regulator (APRG) polypeptides and colling polynucleotides. The APRG polypeptides, polynucleotides and modulators care useful for diagnosis, treatment and prevention of cell proliferative, cimmunological and reproductive disorders. The cell proliferative, climmunological and reproductive disorders. The cell proliferative collisorders include cancers, actinic keratosis, arteriosclerosis, and immunological disorders include acquired immunodeficiency syndrome (AIDS), adult respiratory distress syndrome, Addison's disease, contact dermatitis, amyloidosis, allergies, anemia, osteoporosis, cankylosing spondylitis, amyloidosis, allergies, anemia, osteoporosis, collisease, contact dermatitis, diabetes mellitus, gout, Graves' disease, collisease, contact dermatitis, allergies, anemia, osteoporosis, carythematosus, systemic clupus crythematosus, systemic sclerosis, ulcerative colitis, haemodialysis, collisease, contacting and trauma. Reproductive disorders include disorders of prolactin production, inferritity, endometriosis, polycystic ovary conficient production, inferritity, endometriosis, polycystic ovary conficient for alle breast and gynecomastia. The APRG polymucleotides are useful as are useful as are carcinoma of male breast and gynecomastia. The APRG polymucleotides are useful as correlated with disease. APRG, fragments of it and antibodies specific for APRG are useful as clements on a microarray which is useful to monitor or measure protein-protein interactions, drug-target interactions and gene expression contactions and colline colli

                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes a human death effector domains (DED) containing DNA-binding protein (DEDD) protein, designated DEDD2, that causes cell death. Also described: (1) primer and probe for investigation of the DEDD2 gene; and (2) reagents for gene therapy. DEDD2 has cytostatic activity. DEDD2 can be used in the diagnosis and treatment of cancers of the kidney, large intestine and prostate, and acute and chronic myeloid leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         human; death effector domains containing DNA-binding protein; DED-containing DNA-binding protein; DEDD2; cell death; gene t cytostatic; cancer; chronic myeloid leukaemia; gene; ss.

```
CC ABL39691 to ABL39818 represent novel human nucleic acid sequences CC (NS) can have cycostatic, osteopathic, gynaecological, neuroprotective, CC antirheumatic, antiarthritic, antisporiatic, ophthalmological, represent control of antirheumatic, antiarthritic, antisporiatic, ophthalmological, virucide, CC antirheumatic, antiarteriosclerotic, antiinflammatory, dermatological, cc anticoagulant, antifibrinolytic, hypotension, antiasthmatic, cardiant, CC anticoagulant, antiforinolytic, hypotension, antisthmatic, cardiant, CC anticoagulant, anticonvulsant, antidiabetic, tranquilliser, antiulcer, CC immunomodulator, anticonvulsant, aeuroleptic, cerebroprotective, nootropic and contraceptive activities. The NS can be used in vaccines, CC gene therapy and antisense therapy. Nucleic acids, expression vectors and CC antibodies from the present invention can be used for treating and CC diseases, dystonia, multiple sclerosis, endometriosis, degenerative CC diseases, dystonia, multiple sclerosis, inflammation, skin disorders, CC glaucoma, obesity, muscular dystropsis, inflammation, skin disorders, CC disease, coagulation disease, ischaemia, hypertension, asthma, immune CC disease, epilepsy, angina, neurodegeneration, diabetes, anxiety, CC disease, edisease, and an a contracertive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                           문
                                                                                                                                                                                                ঠ
                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel human apoptosis-associated factor (AAB60386, AAB60387), designated NTZRM100558, which contains a death effector domain (DED) and a caspase family cleavage domain and is capable of inducing apoptosis in cells. The invention also relates to nucleic acids encoding the protein (AAF27407, AAF27408); variants of the protein (particularly dominant negative variants); vectors and host cells comprising a nucleic acid which encodes an apoptosis-associated factor of the invention; the recombinant production of the protein; an antibody against the protein; and methods of screening for compounds which can regulate apoptosis. The apoptosis-related factor is useful in regulating diseases associated with cell proliferation and in screening drug candidates e.g., for regulating cell proliferation or cell death in consenic diseases and chronic viral diseases. The present sequence represents cDNA encoding a substantial proportion of the human apoptosis-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a composition comprising a plurality of cDNAs CC for detecting the altered expression of genes in an immunological CC response. The invention also relates to a method of diagnosing or CC monitoring the treatment of an immunopathological condition in a sample, CC comprising obtaining nucleic acids from a sample, contacting the nucleic acids of the sample with an array comprising the plurality of cDNAs under CC conditions to form one or more hybridisation complexes, detected the phybridisation complexes and comparing the levels of the detecting the hybridisation complexes with the level of hybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile CC immunopathological condition. Also disclosed are an expression profile CC mybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile CC mybridisation of target polymuclatity of detectable complexes and a complexes and a plurality of polymuclectide probes. The cDNAs CC are useful as hybridisable array elements in a microarray for monitoring CC the expression of target polymuclactides. The microarray for monitoring the diagnosis of an immunopathology, such as Crohn's disease, asthma, CC ulcerative colitis, hypercosinophilia, irritable bowel syndrome, CC identifying agents for the treatment of the diseases. The microarray may also be used in drug discovery and development, toxicological and CC carcinogenicity studies, forensics or pharmacogenomics. The composition CC genomic fragments. This sequence represents a human cDNA of the CC invention. Note: The sequence represents a human cDNA of the CC invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at sequence.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a

                                                                                                                                                                                                                                                                                                                                        75
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Submitted (20-JUL-2004) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.
